PROFESSIONAL SUMMARY

Mobile Software Developer with experience building and improving iOS and Android applications. Strong background in mobile architecture, performance optimization, and cross-functional collaboration. Delivered production features, integrated backend services and CMS platforms, and contributed to solutions that improved user experience, operational efficiency, and field accuracy.

EXPERIENCE

iOS Developer

Apr 2024 – Present

Totem · Full-time

- Built from scratch an iOS field-surveying app for subsurface utility mapping, fusing ARKit/LiDAR depth with RTK GNSS, reducing field capture time and improving as-built positional accuracy to centimeter-level precision, which cut rework and utility-strike risk in excavation planning.
- Developed the companion geospatial web platform in Next.js, React, and DeckGL/MapLibre GL, enabling real-time WebGL visualization of field-captured assets with interactive maps, As-Built PDF export, and point cloud integration—completing the full field-to-office pipeline.
- Improved the architecture and performance of the QliQ1s iOS app, a social networking platform for the labor sector that connects freelancers with employers in the US, improving profile search and video presentation features to support the platform's recruitment process.

Software Developer (Mobile & Web)

Aug 2023 – Dec 2023

Ingenious Agency · Contract

- Enhanced the EasyNewz iOS and Android app—an agriculture news platform delivering curated articles in summarized audio format—by implementing personalized commodity and sector interest feeds, role-based onboarding, and bookmarking features using Firebase, improving content discovery for farmers and commodity traders.
- Built content management workflows in FireCMS using React for editors to create, categorize, and publish articles across topics such as agriculture, livestock, and commodities, enabling real-time content updates in the mobile app.

Software Developer (Mobile & Web)

Jul 2020 – Apr 2023

Babel · Full-time

- Re-architected Walmart's Android warehouse inventory app, redesigning core barcode-scanning and task flows for Zebra DataWedge devices and improving app responsiveness by approximately 30%, which accelerated picking and receiving operations in distribution centers.
- Upgraded Walmart's MoneyCenter Android app by integrating a self-service remittance module using Airpak APIs, enabling customers to complete transactions on Elo kiosks and reducing wait times at in-store service counters.
- Led the migration of an internal Walmart's system from Power Apps to React, consolidating multiple workflows into a unified web platform and improving response time, usability, and maintainability.

- Adapted the open-source OpenTrace iOS app implementing the BlueTrace BLE contact-tracing protocol—configuring CoreBluetooth Central/Peripheral exchange, CoreData encounter storage, and Firebase Cloud Functions for OTP verification—for the Costa Rican Social Security Fund (C.C.S.S.), enabling anonymous proximity logging to support national COVID-19 exposure notification.

Mobile Application Developer

Oct 2019 – Mar 2020

MobtionBusiness · Full-time

- Designed and developed an offline-first Xamarin.Forms application for ION Financiera (México) to digitize construction progress verification for bridge-loan projects, featuring GPS-based site confirmation, granular per-trade progress tracking, photo evidence capture, and digital signatures, with local SQLite storage syncing to the company's backend—replacing manual paper-based inspections for field analysts.

Mobile Application Developer

Feb 2019 – Aug 2019

Bilco Costa Rica · Internship

- Designed and built end-to-end a Xamarin.Forms post-sales service app for Android and iOS at Bilco Costa Rica, backed by an ASP.NET Web API and SQL database, allowing homeowners to submit warranty claims with photo, video, and document attachments, track technician visit scheduling, and follow case resolution timelines—automating approximately 80% of manual post-handover processes previously handled by phone and paper.

EDUCATION

Bachelors Degree in Computer Engineering

2013 – 2018

Instituto Tecnológico de Costa Rica

Masters Degree in Cybersecurity

2025 – Present

Instituto Tecnológico de Costa Rica

SKILLS

Mobile:	Swift (expert), Kotlin (proficient), Android SDK, Xcode, Jetpack Compose, Xamarin (prior experience)
Web / Frontend:	React (proficient), Next.js, TypeScript, JavaScript, Tailwind CSS, HTML, CSS
Backend / Services:	Node.js, REST APIs, Firebase, AWS Amplify, ASP.NET Web API (prior experience), SQL
Testing / Tools:	XCTest, JUnit, Appium, Git, CI/CD
Architecture / Practices:	MVVM, Design Patterns, Clean Code, Data Structures, UI/UX, Geospatial/WebGL

LANGUAGES

C1 English
Native Spanish
